

The State of New Hampshire  
**DEPARTMENT OF ENVIRONMENTAL SERVICES**

**Thomas S. Burack, Commissioner**

January 15, 2009

The Honorable Judith T. Spang, Chairman  
House Resources, Recreation and Development Committee  
Legislative Office Building, Room 305  
Concord, New Hampshire 03301

**Re: HB 205-FN, relative to certain boating fees**

Dear Chairman Spang:

Thank you for the opportunity to comment on HB 205, which would increase boating registration and license fees to be allocated to the Department of Safety and increase the allocation of boat registration fee funds to the Department of Environmental Services (DES), Lake Restoration and Preservation Fund. An additional \$1 per boat registration would be provided to DES to strengthen our ability to control exotic aquatic weeds in New Hampshire's surface water bodies. DES supports this legislation.

DES currently receives \$5.00 per boat registration to fund the Exotic Species and Clean Lakes Programs. In accordance with RSA 487:25, I, \$1.50 is allocated for the control of exotic aquatic weeds, \$3.00 for the milfoil and other exotic aquatic plants prevention program, and \$0.50 for lake restoration and preservation measures. The actual number of boat registrations varies from year to year, but is typically around 100,000 boats. Therefore, the total annual revenues provided to DES from boat registration fees are typically around \$500,000. HB 205 proposes to increase the annual revenues dedicated to the control of exotic aquatic weeds by \$100,000, by increasing this portion of the fee by \$1.00.

For at least 5 years, significantly more applications for exotic aquatic weed control projects, especially for milfoil, have been received by DES than could be funded. For example, for State Fiscal Year 2009, DES has a total of \$60,000 available for exotic aquatic weed control fund project grants as compared with 30 applications with a total estimated cost of \$400,000. Consequently, DES will only be able to fund thirteen of a possible thirty exotic aquatic plant control projects, and the ones funded will be at 30% of total project costs, rather than the traditional 50%, to support more projects. Therefore, the extra \$100,000 per year that could be provided by the proposed fee increase would serve to substantially expand the coverage of this program in future years. It will also enable us to implement better, more integrated approaches for many infested water bodies.

In conclusion, the proposed increase in funding for the exotic aquatic species program proposed by HB 205 will expand the state's ability to control exotic aquatic species in New Hampshire and enhance the protection of the health and integrity of our waterbodies for future generations. At your request, we would be happy to provide you with a detailed presentation on the extent of the exotic aquatic weed problem in New Hampshire and the long term control strategies that these additional resources would support.

The Honorable Judith T. Spang
